Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to a neural stimulation system, classified in class 607, subclass 57.
- II. Claims 9-15, drawn to a remote control unit, classified in class 607, subclass 60.
- III. Claims 16-20, drawn to a method of controlling an implantable neural stimulator, classified in class 128, subclass 898.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as product and process of use respectively.

The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method does not require the distance limitations of the remote controller of invention II or the coil members of invention I and thus can be performed using a device that lacks these features.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the limitations of the

Art Unit: 3762

transmittance distances are not recited. The subcombination has separate utility such as a communication circuit for a pacemaker.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
